

AEM Training - Day 2 Assignment (19-03-2025)

1. What is DAM and Why Do We Use It?

Answer:

DAM (Digital Asset Management) is a system in AEM that helps in storing, managing, and retrieving digital assets like images, videos, and documents efficiently.

Why do we use DAM?

- Centralized storage for digital assets.
- Supports metadata management.
- Generates renditions for different formats.
- Enables workflow and versioning.

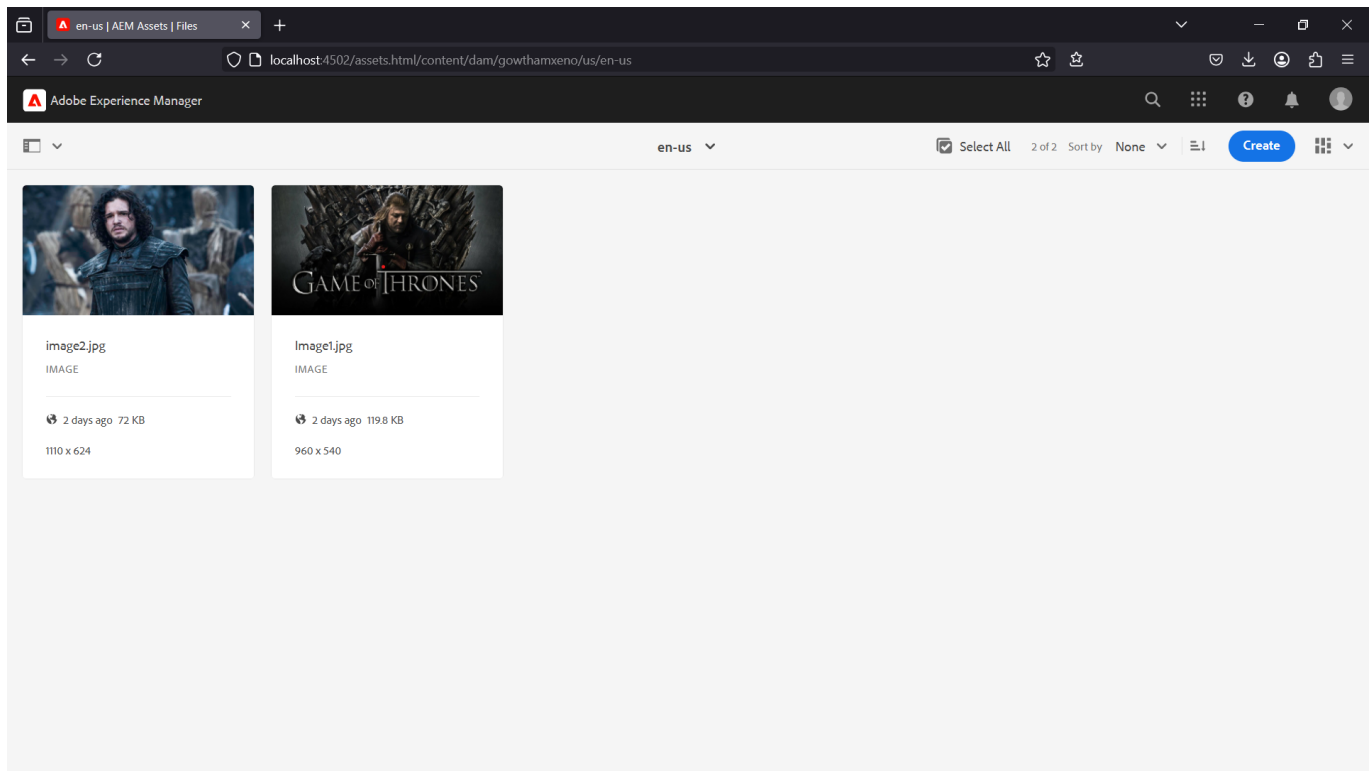

2. Create One Folder Inside Our Project Folder and Follow the Path:

```
/content/dam/gowthamxeno/us/en-us
```

Steps:

1. Navigate to DAM console: <http://localhost:4502/assets.html/content/dam>.
2. Create a folder inside [/content/dam/](#).
3. Upload two images into [us/en-us](#).
4. Author images using the **Image Component** on a page.

Screenshot:

3. What is Renditions?

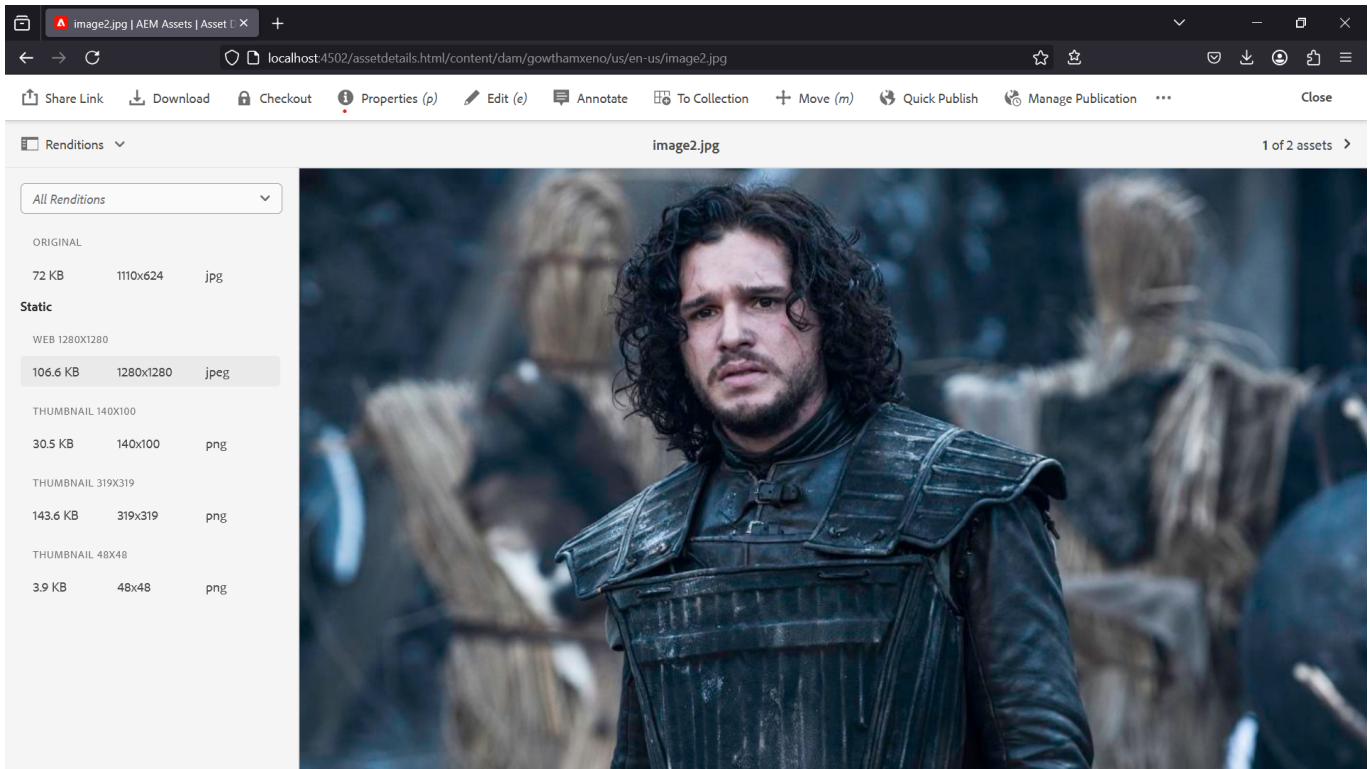

Answer:

Renditions are automatically generated versions of an uploaded asset in different sizes and formats for better optimization and performance.

Steps to Check Renditions:

1. Open **AEM DAM Console**.
2. Select the uploaded image.
3. Go to **Properties** → **Renditions Tab**.
4. View the generated renditions like thumbnails, web-optimized images, etc.

Screenshot:

4. Add Two Fields in HelloWorld Component

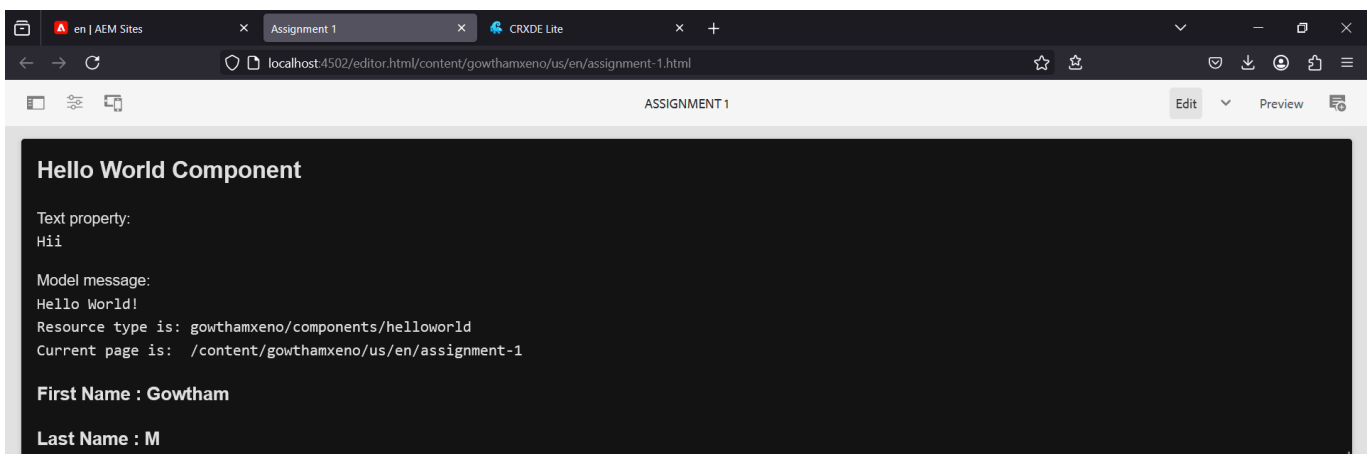

Steps:

1. Open **CRXDE Lite**: <http://localhost:4502/crx/de/>
2. Navigate to `apps/gowthamxeno/components/helloworld`.
3. Add `firstName` and `lastName` fields in `cq:dialog`.
4. Print values in `helloWorld.html` using properties.

Code Snippet:

```
<p>First Name: ${properties.firstName}</p>
<p>Last Name: ${properties.lastName}</p>
```

Screenshot:

5. Try Using @ValueMapValue Annotation

Steps:

1. Open `HelloWorldModel.java`.
2. Add `@ValueMapValue` annotation for `firstName` and `lastName`.

Code Snippet:

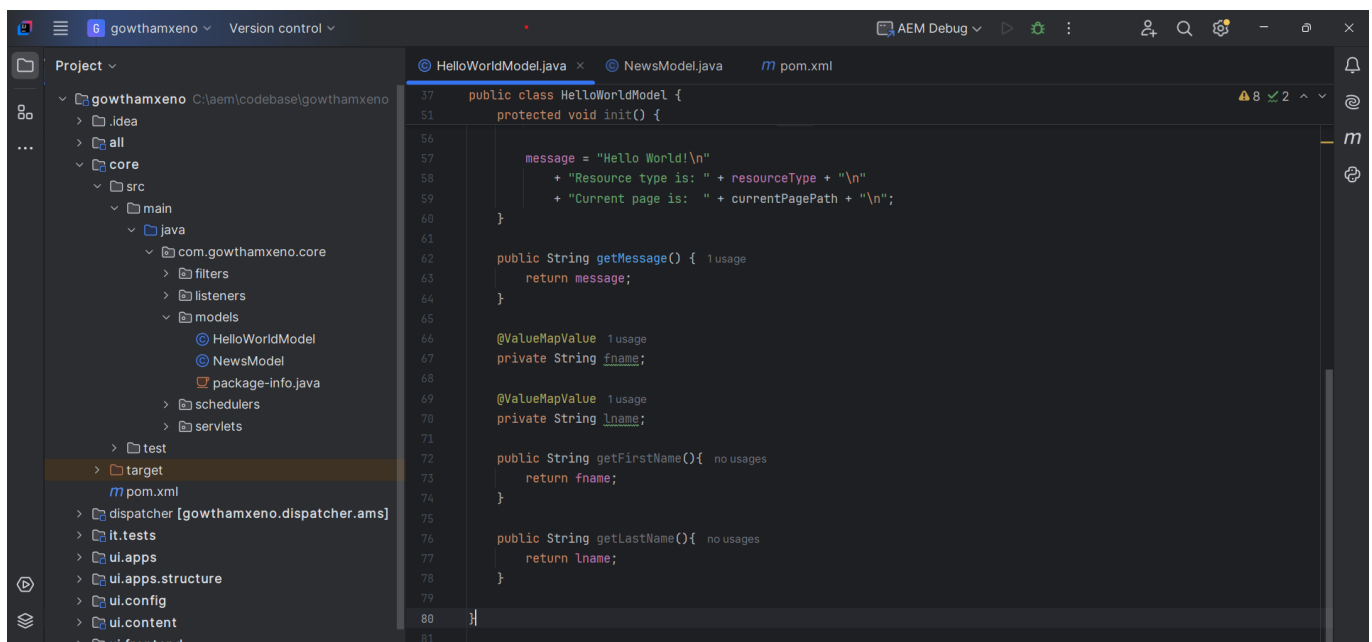

```
@Model(adaptables = Resource.class)
public class HelloWorldModel {
    @ValueMapValue
    private String firstName;

    @ValueMapValue
    private String lastName;

    public String getFirstName() {
        return firstName;
    }

    public String getLastName() {
        return lastName;
    }
}
```

Screenshot:

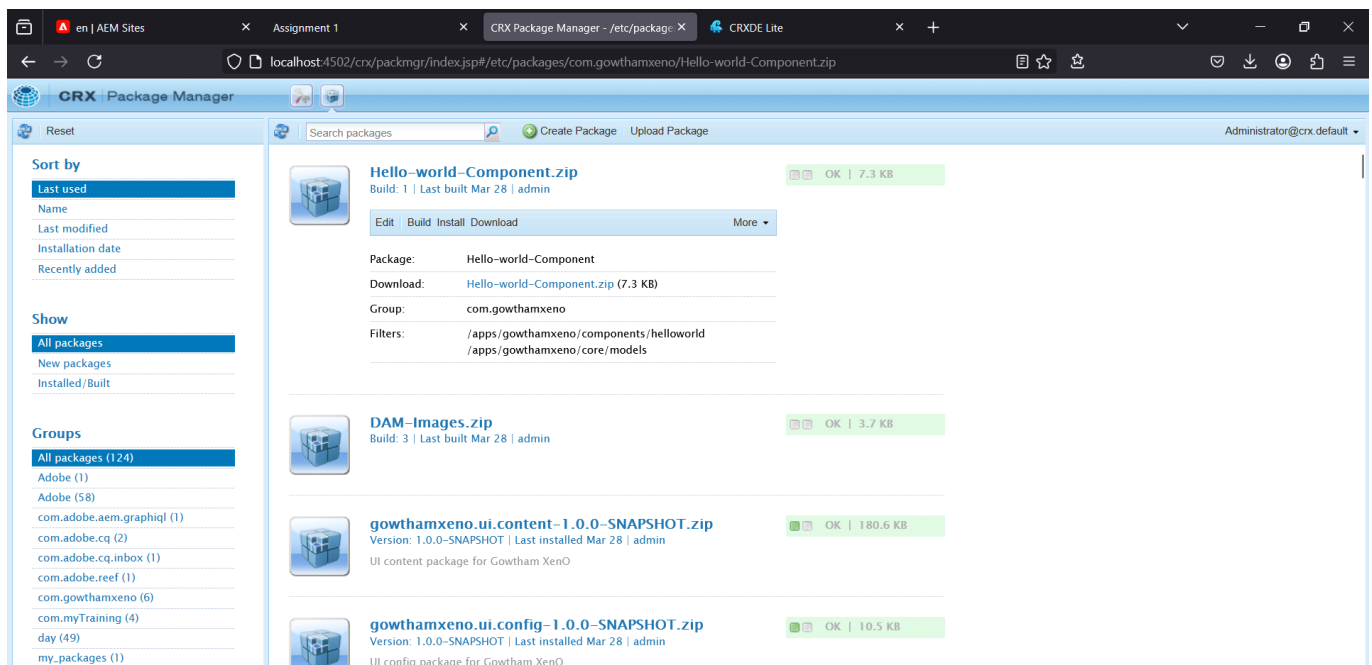

6. Why Are We Using Package Manager and JAR?

Answer:

The **Package Manager** in AEM is used to create, install, and transfer content packages between different environments (e.g., author to publish instances).

Steps to Create Packages:

1. Open **Package Manager**: <http://localhost:4502/crx/packmgr/index.jsp>
2. Create two packages:
 - **DAM Package** (Images from </content/dam/gowthamxeno/us/en-us>).
 - **HelloWorld Component Package** (Component from </apps/gowthamxeno/components/helloworld>).
3. Build and download the packages.

Screenshot:**7. Configure Replication Agent and Publish the Page****Steps:**

1. Open **Replication Agents** in AEM:
<http://localhost:4502/etc/replication/agents.author.html>
2. Select **Default Agent** and configure with **publish environment URL (4503)**.
3. Click **Test Connection** to ensure connectivity.
4. Publish the page from **4502 → 4503**.
5. Open the published page: <http://localhost:4503/content/gowthamxeno/us/en.html>
