

AEM Training - Day 5 Assignment (24-03-2025)

Implementation Guide

1. Creating News Articles

Description:

We will create structured **News Articles** in AEM under a dedicated section.

Steps:

1. Navigate to **/content/us/en/news** in AEM.
2. Create five unique **news pages** with:
 - **Headline** (**h2**)
 - **Article Content** (**p**)
 - **Publication Date**

Screenshots

2. Adding the News Component

Description:

The **News Component** will display news articles dynamically.

Steps:

1. Use the **existing News Component** to render articles.
2. Ensure it includes:
 - **Headline** (**<h2>**) with distinct styling.
 - **News Content** (**<p>**) for article details.
 - **Publication Date** with proper formatting.

3. Maintain a **responsive and visually appealing design**.

Code Snippet (**NewsComponent.html**):

```
<div class="news-item">
  <h2>${newsModel.headline}</h2>
  <p>${newsModel.content}</p>
  <span>${newsModel.publicationDate}</span>
</div>
```

3. Setting Up the Header

Description:

A **Header Experience Fragment** will be created for seamless navigation.

Steps:

1. Create a **Header Fragment**.
2. Include navigation links to:
 - **News Section** (linking to news pages)
 - **About Me** page
 - **Contact Us** page

4. Configuring the Footer

Description:

A **Footer Experience Fragment** will be configured with multiple sections.

Sections:

1. **Latest News Section:**
 - Use a **List Component** to display recent news articles.
2. **About Me Section:**
 - Add a **Text Component** with journalist details.
3. **Contact Section:**
 - Include office address, phone number, or email.
4. **Social Media Section:**
 - Use a **List Component** for social media links.

5. Developing a Custom Service

Description:

A **Custom OSGi Service** will be developed to return a simple response.

Steps:

1. Create an OSGi service class in **Java**.
2. Inject it into the **News Component's Sling Model**.
3. Log the service output in AEM logs.

Code Snippet (**HelloWorldService.java**):

```
@Designate(ocd = HelloWorldConfig.class)
@Component(service = HelloWorldInt.class)
public class HelloWorldService {
    public String getMessage() {
        return "Hello World from Custom Service";
    }
}
```

Service

6. Implementing API Configuration

Description:

We will develop a configuration to **store third-party API URLs** and fetch data.

Steps:

1. Define an OSGi configuration for API URLs.
2. Fetch JSON data from a sample API.
3. Log the response in AEM logs.

Example API:

`https://jsonplaceholder.typicode.com/posts`

7. Adding Screenshots for About Me and Contact Us Pages

Description:

Allocate space for screenshots of the **About Me** and **Contact Us** pages.
